

InkJet T-shirt Transfer Paper Instructions

Create your own custom designs using our InkJet Transfer Paper and an inkjet Printer. Transfer your images onto white or light colored textile items such as T-shirts, totes, hats, bibs, mouse pads, photo puzzles, etc.

Do not use in Inkjet printer that works with a heater!

PRINTING

1. Print in mirror image mode onto the smooth side of paper. Please note that for all printers, ink levels should be reduced on the printer drive set-up/options and resolution of image may be reduced. For best results paper settings should be set to "Plain Paper" or "Transfer Paper". Some experimentation may be required.
Canon BJC-600/BJC-4000
Set the 'Media Options' setting to 'Normal Paper Quality' and print the image in reverse (mirror image) onto the Transfer Paper.
Epson Stylus/Epson StylusS Pro
Set to "360dpi or 720dpi" (if image is not too dark). Use "Special Coated Paper" and "Micro Weave" mode for your settings. Brightness should be set approx. + 10% in order to reduce ink saturation. Set color on CMYK. Print in mirror image mode.
Hewlett Packard 500,600,800 SERIES
Set paper settings on "Plain Paper or Special Paper" and print quality on "Normal". Click "Flip Horizontal" in paper mode to mirror the image. Reduce ink on "Manual/Option" setting.

*Note: Allow printout to dry before you proceed to next step.
Transfer onto 50/50 fabrics*

PREPARATION & TRANSFERRING

1. Cut out image leaving ¼" to 1" border.
2. Be sure that garment is completely flat and wrinkle free. Iron on a flat, hard surface.

Home Iron:

Preheat iron to highest setting. Do not use steam. Place transfer paper, image side down onto fabric.

Do not use ironing board.

Iron transfer image for a least 3 minutes, using even pressure. Be sure to overlap on all corners and edges. Allow printed area to cool and with firm, steady pressure remove transfer paper beginning at one corner. If matte finish is desired, place a silicon paper sheet (larger than image to allow for good grip) over image and iron for 15 seconds more and remove immediately. This step will ensure good wash ability and longer lasting image.

Commercial T-shirt Press

Preheat press to 350 F. Place transfer paper, image side down onto fabric.

Press with good pressure for 15 seconds. Allow printed area to cool and with firm, steady pressure remove transfer paper beginning at one corner. If matte finish is desired, place a silicon paper sheet (larger than image to allow for good grip) over image and iron for 10 seconds more and remove immediately. This step will ensure good wash ability and longer lasting image.

3. *Allow one day before washing imaged item. Wash in cool/ warm water turning garment inside out removing as soon as washing cycle is complete. Do not use bleach. Lay flat to dry for best results. Do not re-iron image.*
